Version 5.3 is here!

The most important set of upgrades we've released so far.

Updated 4 Nov 2026

Read online: https://traderange.net/blog/version-5-3-rx4mpwdw/

Version 5.3 is our first public release since V5 back in August. It packs a bunch of fresh new features and upgrades to boost our server stability and community engagement.

Login with GitHub

Our first major addition is the "Login with GitHub" button, which you can use at sign-in. This should make it easier for more people to access the site. Data is processed to the same standard as our other login methods. Unlike discord this doesn't allow you to set a Home Server, due to dual account issues.

View what you have left to play

We now show you which daily challenges you have completed and which are still left to do.

Data now uses a different AT REST encryption method

To boost site speed and allow more simultaneous users we have upgraded the encryption and decryption algorithms, but do not worry, your data is still equally protected. We also have pre-compiled some scripts to reduce CPU load.

Customised Recommendations

We are now using a record of what articles you have read to make better recommendations for your next read.
